

FCC:

It seems to me that every consumer oriented satellite technology that spawns from my tax dollars investment into outer space exploration is discouraged. As tax payers we fund NASA and the military, yet as consumers we are cheated from the advancements of technology. I want more, not less options of what I watch, hear and read.

The NAB petition 04-160 should be rejected by the FCC. If it in fact discourages competition, it is not good for the tax paying public.
